GLOBAL SYSTEMS INTEGRATION

Broadcast companies planning a new facility, OB vehicle or installation have an almost infinite number of ways to achieve their goals and the introduction of new technologies, such as 4K & HD broadcasting, file based workflows, is causing these options to multiply. The choice of equipment is an important part of the decision-making process, but the overall design of the system and budget-conscious project management are equally critical.

This is where Megahertz can help. We rationalise the bewildering variety of choices, producing a cost-effective design, procuring the necessary equipment and handling and project managing the installation or construction of the agreed system, all within an agreed timescale and budget.

Megahertz offers many important skills in-house including: CAD design, mechanical and electrical engineering, and on-site coach building and woodworking services, wiring and installation. With all of these disciplines efficiently integrated at Megahertz headquarters, project costs are kept low, and our customers have a single responsible point of contact.

Megahertz's involvement doesn't end with the completion of the building work. No complex broadcast system is any use without training and support, and Megahertz can offer both where required. From design to realisation, installation and training, on time and in budget – that's the Megahertz end-to-end approach to systems integration.

Company Overview

Megahertz designs, engineers and delivers turnkey systems to the world's leading broadcasters, content owners and media service providers. As a leading systems integrator, its expert team of skilled engineers and solutions architects, drawn from both broadcast and IT backgrounds, ensures a creative, forward-thinking, independent and highly efficient approach. Megahertz provides dynamic and resilient systems for news and sport production, state-of-the-art studios and advanced file-based workflows, as well as fully equipped vehicles for outside broadcast and newsgathering. The company also provides consultancy, training and support services.

With a reputation for excellence since 1982, Megahertz continues to deliver value-added engineering solutions worldwide.

- Consultancy
- Workflow design
- Project planning
- Equipment supply
- Systems integration
- Training and commissioning
- Support

THE MEGAHERTZ APPROACH

Listen and Learn

Clients' needs come first. Megahertz listens to your needs, goals & objectives and incorporates them into a project definition. In the process we seek to understand your business, its unique requirements. We identify the technologies and the economics that are rational, supportable and applicable to your objectives.

Focus and Research

Working closely with you, Megahertz applies experienced engineers, technologists and consultants to optimise a solution that targets the scope, budget and schedule – developing first a project plan, then a conceptual design, followed by a critical design, and culminating in a detailed set of construction and workflow documents. You will benefit from experienced business professionals and engineers who frequently challenge our recognised industry experts and potential vendors to find imaginative solutions applicable to your project.

Independence: The Key to Quality

Megahertz is independent but maintains healthy relationships with major media equipment and software vendors. We are neither owned nor aligned with any vendor, providing our clients with a truly objective perspective for business and technical analysis, system design and equipment selection.

Project Execution

Once the client has approved the critical design, Megahertz will execute the project implementation plan, with the procurement of equipment, the pre-fabrication of systems in our assembly plants and completion of final installation on site, including testing and commissioning.

Client Training and As-Built Documentation

We take your finished product as seriously as you do. Once Megahertz thoroughly tests all the systems, we coordinate and manage the training of your staff. We work with vendors and your operators and technicians to ensure they feel familiar and comfortable with the new systems. We then deliver a complete and accurate set of 'as-built' project documentation.

Management

Simply put, no job is complete until the agreed program of requirements is met. By utilising our service-orientated project management professionals we make certain that the controlling elements of SCOPE, BUDGET and SCHEDULE are adhered to, communicating through routine progress reports both internally and externally to all stakeholders.

Follow-up and Support

In short, we value our customer relationships for life. Megahertz continues to support our clients long after we've left your site, 'as-built' documents are delivered, and after that last invoice is paid, there is no defined end point in our mind. The time frame for support is as long as you need it.
